## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 9-17 have been considered but are not persuasive. The newly amended claims replaced the word "ultrasonic element" with "piezoelectric element" which did not change the scope of the claims in any way and hence the rejection still holds.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. **Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by U. S. Patent No. 6,100,626 to Frey et al.**

4. Regarding **Claims 9, 11, 16, and 17**, Frey teaches an ultrasonic probe, comprising: an ultrasonic element for transmitting and receiving an ultrasonic signal (Abstract); a signal line for transmitting an electric signal to or from the ultrasonic element (Abstract and Fig. 3); and a ground line for supplying a ground potential to the ultrasonic element, the ultrasonic probe further comprising: a sensor signal substrate and a sensor ground substrate connected electrically with the ultrasonic element (Fig. 3); a cable substrate for electrically connecting the sensor signal substrate and the

sensor ground substrate with the signal line and the ground line, respectively, wherein the sensor ground substrate and the cable substrate are connected directly or via a relay ground substrate. (Fig. 3 and Claim 8); and at least a part of the sensor signal substrate is covered with the sensor ground substrate or the relay ground substrate.(Fig. 3)

5. Regarding **Claims 10**, Frey teaches that at least a part of the cable substrate is covered with the sensor ground substrate or the relay ground substrate. (Fig. 3, Claim 8)

6. Regarding **Claims 12-15**, Frey teaches that at least a part of the ultrasonic element is covered with the sensor ground substrate or the relay ground substrate. (Fig. 3 and Claim 1-3 and 8)
